

Growing Grit: Raising Strong, Resilient, Extraordinary Women

For nearly three years, our worlds have been turned upside down. With “normal” activities few and far between, parents have struggled in helping their children find new ways to continue to grow and develop all the while maintaining self-esteem and increasing risk-taking skills. We seen levels of depression and anxiety soar, which has left parents feeling raw and uncertain about how to help their kids take on challenges when the future is filled with question marks.

Kirsten is here to clarify what are the keys to becoming grittier and discuss tools for both mothers and daughters to use now which will help them through the uncertain times and beyond.

We all want to raise happy, healthy children. Kirsten is working on her first book now, *Raising Empowered Athletes*, because above all, she believes we want our kids to one day fly out of the nest (regardless of whether your child is an athlete or not) knowing that they are enough, just as they are. We want them to know that each of them is capable of handling any headwinds that blows their way, now is the time to equip them with the tools to do that.

Kirsten, a Hall of Fame DI volleyball player from The College of William and Mary in Virginia and fourteen-year NIKE executive, is now a motivational speaker, writer and Peak Performance Coach. Her clients include teen athletes (and their parents), where she helps them learn how to reach their goals and release their limitations. She co-hosts the #RaisingAthletes Podcast with Susie Walton on iTunes and is working on her first parenting book about raising empowered athletes. Kirsten and her husband are raising three athletes themselves (ages 21, 19, & 16) in Los Angeles. Kirsten also coaches club volleyball and enjoys hiking in the Santa Monica mountains with her white lab puppy, Poppy.
